Description

The Competition I-Beam forged conrod can run with the High Horsepower and Boost applications.

Features:

- Built from the aircraft materials 4340 high tensile steel with a specially optimized shape for high performance and extreme durability. And they can be used in conjunction with aftermarket pistons.
- The bushings are made from QAL10-3-1.5 material, for excellent resistance to wear and fatigue and have radial groove acting as an oil reservoir.

- They are shot peened to relieve stress from the material and improving fatigue life
- The tight tolerances in the production process, ensure a perfect fitment while optimizing the oil clearances. Bend and twist is tightly controlled.

Main size tolerance at below:

Center to center length: +/- 0.05mm;

Big end bore: + 0.013mm;
